

THE GARLAND COMMITMENT TO SUSTAINABLE DESIGN

Most design professionals agree that sustainable design is the right thing to do, for our planet and for our children. But realizing those aspirations requires partnering with material and service providers who understand how to achieve environmentally responsible solutions at a reasonable cost, while sustaining the highest level of building envelope performance. Garland is committed to making *the right thing* achievable for our public and private sector customers, and the architects and design professionals who serve them.

COMPARATIVE ANALYSIS OF SUSTAINABLE SOLUTION BENEFITS

	Metal Roofs and Wall Systems	Long-Lived Modified Systems	Reflective Coatings	Restoration Systems/ Maintenance Solutions
LEED® Point Potential	Better	Better	Better	Good
Energy Savings	Better	Better	Best	Good
